Agenda

- What is Dirmaint?
- Dirmaint Advantages
- Finishing the Install
- Set Up Configuration Files
- Command Entry
- Integration with RACF
- Programming Dirmaint
- Common Tasks

What is Dirmaint?

- Pre-installed, priced, optional feature of z/VM
- CMS application that manages the directory
- Provides multiple interfaces
 - Primarily a command interface
 - Full screen field entry
 - Program driven
 - REXX
 - SMAPI

Dirmaint Advantages

- Installed and Maintained with z/VM
 - RSU service delivered and installed with service stream
- Most commands to maintain the directory mimic regular directory statements
- Completing the install is simple and well documented
- Automated disk allocation eliminates costly mistakes
 - Not using a current diskmap +
 - Allocating a minidisk = potential disaster

Finishing Dirmaint install

- A few steps remaining before full use
- Chapter 4 in "z/VM: Getting Started With Linux on System z"
 - Enable Dirmaint
 - Change service machine passwords
 - Create/Modify configuration files *
 - Import current user directory
 - Put Dirmaint into production
 - Start Dirmaint

- Three types of primary configuration files
- CONFIGXX DATADVH
 - Configuration control keyword parameters
- AUTHFOR CONTROL
 - User command authorization
- EXTENT CONTROL
 - Minidisk allocation/boundaries

CONFIGXX DATADVH

- Dirmaint configuration override file(s)
- xx=one or two EBCDIC characters
- Processed in reverse EBCDIC sequence
 - Numbers before letters, 99-0 (zero-blank), Z9-AA
 - Standard CMS filemode search used across minidisks
- CONFIG DATADVH is processed last
 - The default list of all keyword values
 - Should not ever be modified, always use an override
- Contains keyword values controlling the function of Dirmaint

AUTHFOR CONTROL

- Contains a list of IDs that can issue Dirmaint commands for other IDs and the privileges available to them
 - EG: USERA can issue commands against the directory of USERB
- Resides as a file under Dirmaint's control
- Maintained by AUTHFOR and DROPFOR commands

```
*TARGETI ORIGUSER ORIGNODE CMDL CMDSETS
ALL MAINT * 140A ADGHMOPS
ALL MAINT * 150A ADGHMOPS
```

- AUTHFOR CONTROL
 - Adding/Removing user authorizations
 - Via command
 - Dirmaint AUTHFOR and DROPFOR
- Editing the file
 - Get a copy from Dirmaint
 - Use XEDIT to modify the file
 - Send it back to Dirmaint
 - Load the new version of the file into memory
- "Directory Maintenance Facility Tailoring and Administration Guide", Chapter 8
 - "Delegating Administrative Authority"

EXTENT CONTROL

- Controls minidisk allocations
- Divided into a number of sections
 - REGIONS
 - GROUPS
 - EXCLUDE
 - AUTOBLOCK
 - DEFAULTS

EXTENT CONTROL

- REGIONS
- Defines an area on a disk device that is used for minidisk allocation
- Can be one or more parts of a volume
- Typically a full volume

:REGIONS.

*RegionId	VolSer	RegStart	RegEnd	Dev-Type	Comments
VM5RES	VM5RES	0	END	3390-03	
VM5W01	VM5W01	0	END	3390-03	
VM5W02	VM5W02	0	END	3390-03	
VM5WK1	VM5WK1	0	END	3390-03	
VM5WK2	VM5WK2	0	END	3390-03	

:END.

EXTENT CONTROL

- GROUPS
- Collection of one or more regions
- Forms a pool of disk space from which to allocate
- Allocations can be first to last or rotating

```
*GROUPS.

*GroupName RegionList

VMSYSTM (ALLOCATE ROTATING)

VMSYSTM VM5RES VM5W01 VM5W02

LNXDSK1 (ALLOCATE ROTATING)

LNXDSK1 VM5WK1 VM5WK2

:END.
```

- EXTENT CONTROL
 - EXCLUDE Defines which minidisks are excluded from extent checking
 - AUTOBLOCK Specifies device architecture values for each type of DASD
 - Taken from AUTOBLK DATADVH
 - DEFAULTS Device capacity table
 - Taken from DEFAULTS DATADVH

Finish Install

- Import USER DIRECT
 - Copy directory from MAINT
- Put into production
- Bring up Dirmaint
 - DVHBEGIN
- Disconnect from Dirmaint
- Logon to MAINT

- Single source directory
 - Managed by DIRMAINT on one member
- Each member has it's own object directory
 - Directory changes signaled from DIRMAINT to DIRMSAT
 - DIRMSAT runs on other cluster members
 - Directory management commands on satellite members are routed to DIRMAINT
- DASD allocation changes
 - Handled by DATAMOVE virtual machines
 - Each member can have one or more allocated to them

- IDENTITY and SUBCONFIG(s) are maintained separately
- Adding an IDENTITY

dirm add zmap

```
IDENTITY ZMAP VELOCITY 32M 64M G
INCLUDE VSIPROF
IPL CMS
XAUTOLOG ZSERVE
LINK ZWRITE 0191 0100 RR
```

- The SUBCONFIG(s) are in different files
- Adding a SUBCONFIG

dirm add zmap-1 build on vsivm5 in zmap

```
SUBCONFIG ZMAP-1

MDISK 0191 3390 1142 100 VM5W02 MR

MDISK 0192 3390 1242 300 VM5W02 MR

- Commands invoked using the DIRM EXEC
- First parameters can be a modifier
 - TOsys | TOnode route command to another VM network node
 - ASuser when used with TO, issue command AS this user
 - BYuser issue command with auth of this user (like LOGONBY)
 - FORuser command affects named user (most common)
 - ATsys | ATnode route command to a node in a multi-system cluster
 - If no modifier is used, command is invoked for the current user at *
- Remainder is a Dirmaint command

 Dirmaint commands are similar to most directory equivalents

- All directory entries now managed by Dirmaint
 - Commands must be used to perform directory maintenance
 - Changes are put online immediately
 - Individual directory entries can be modified
 - GET/REPLACE
 - Wildcards can be used to affect matching virtual machines
 - MULTIUSER prefix option, MULTIUSER_VERIFICATION_EXIT
 - Changes can be batched
 - Multiple commands in a file, invoked with one execution

Integration with RACF

- Dirmaint can call RACF for the following functions
 - User add or change
 - Password or passphrase change
 - LOGONBY change
 - POSIX parameter change
 - Minidisk commands (AMDISK, DMDISK, etc)
- All are optional
- Controlled by CONFIGRC SAMPDVH
 - Which must be copied to Dirmaint
 - Renamed CONFIGRC DATADVH

Integration with RACF

CONFIGRC SAMPDVH

```
USE RACF= YES|NO ALL|exit name
PASSWORD_CHANGE_NOTIFICATION_EXIT= DVHXPN EXEC
POSIX CHANGE_NOTIFICATION_EXIT= DVHXPESM EXEC

```

Integration with RACF

- Start with RACF Program Directory
 - Chapter 5, Step 13
 - "Set Up the DirMaint-RACF Connector if DirMaint is Installed (Optional)"
- CONFIGRC DATADVH values are explained
 - Chapter 3, Step 5
 - Dirmaint Tailoring and Administration Guide
- Additional steps
 - Appendix A
 - Dirmaint Tailoring and Administration Guide

Programming with Dirmaint

- Two primary ways to interface with Dirmaint
 - REXX
 - SMAPI
- Systems Management Application Programming Interface (SMAPI)
 - A method for internal or external programs to invoke Dirmaint functions
 - Uses an IP connection to send function requests
- Configuration
 - Appendix B
 - "Dirmaint Tailoring and Administration Guide"
- Programming and more
 - "z/VM Systems Management Application Programming"
- SMAPI allows internal and external programs to drive Dirmaint and z/VM functions
 - Extensively used by zPro
 - Providing a web based front end to Dirmaint, RACF and z/VM

A Few Common Dirmaint Tasks

- Changing Storage
- Adding/Removing a LINK
- Creating a disk map
- Adding a Minidisk
- Adding Logonby entries
- Changing users password

Creating a Disk Map

- Traditionally used as a way to find available space
 - With the DISKMAP EXEC
- Dirmaint provides a set of commands to produce information related to disk usage
 - DIRM DIRMAP
 - DIRM FREEXT
 - DIRM USEDEXT

Creating a Disk Map

DIRM DIRMAP

- By itself returns a RDR file that contains a map of each minidisk allocated on each volume on the system
- Additional options
 - link map
 - gap file
 - eliminate excluded extents
 - sorting by device type

 - Defeats one of the major benefits
- Automatic allocation will look for open disk space
 - Based on volumes/regions defined in EXTENT CONTROL
 - Proper volume sizing is important

SMAPI

- Systems Management Application Programming Interface
 - Set of callable functions
 - Used to manipulate the user directory
 - Control a z/VM system
 - Requires a directory manager

SMAPI functions

- Create a new virtual image
- Allocate and manage resources
 - Disk, Network, Memory
 - DASD volumes and groups
 - LAN access lists
- Activate/Deactivate image(s)
- Query image configuration information
- Manage directory profiles
- Cluster functions
