

# VELOCITY SOFTWARE ANNOUNCES zPRO VERSION 5.2.

YOUR SOLUTION FOR MANAGING  
HIGHLY VIRTUALIZED LINUX ENVIRONMENTS ON IBM Z  
JUST REACHED A NEW LEVEL  
OF PRODUCTIVITY AND EFFICIENCY.

zPRO Focuses on four main cornerstones:

**Providing administration  
for an on-site cloud with z/VM**

**Simplifying access and skills  
requirements for managing z/VM**

**Reducing z/VM Management tasks  
by safely empowering your end users**

**Fast and Easy cloning of servers  
and virtualized environments**

## NEW FEATURES IN VERSION 5.2.:

### BACKUP & RESTORE

The zPRO Backup and Restore feature enables you to backup important files that you want to recover in case of unintentional erasure, updates or corruption. It will allow you to define backup sources of user MDISKS or SFS Directories. It handles Full and Incremental backups, schedules the backup job based on your configuration settings and supports multiple compression options. It is quick and easy to set up and manage, and restoring files is fast.

### LINUX COMMAND INTERFACE

The zPRO Linux Command Interface feature enables a connection to a Linux server in order to issue commands and see the response, directly from the zPRO session. It is intended for quick and easy access to your Linux guest for things like querying resources, setting up devices or even fixing network issues.

### SFS FILE POOL MANAGER

With a few fields and one push button, you can now build an SFS File Pool as Local, Remote and SSI enabled. zPRO handles all the details for you. This will make the Backup and Restore feature really easy to set up so you can build a repository SFS file pool for the backups.

### EVENT SCHEDULER

The zPRO Scheduler is managed completely via a web based user interface. No 3270 is required. The web interface allows the user to display the currently scheduled events, create a new event, and delete one or more events.
